

Security Advisory 06.12.2018

VULNERABILITY DETAILS & ACTION PLAN

VMware has released a security update to address a vulnerability in VMware AirWatch Agent. A remote attacker could exploit this vulnerability to take control of an affected system.

The National Cybersecurity and Communications Integration Center encourages users and administrators to review the VMware Security Advisory [VMSA-2018-0015](#) and apply the necessary update.

Need help?

SyCom will be happy to assist with remediation efforts related to any vulnerability your business might experience.
