

Prime Workplace: On-Premises VDI Solution

BUSINESS REQUIREMENTS

- Increasing number of employees working remotely.
- Significant user data and key applications hosted on customer's premises.
- Limited ability to build and support virtual desktop infrastructures.
- Desire familiar Windows 10 desktop regardless of user's endpoint.

IDEAL END-USER EXPERIENCE

- Increased application performance with compute, processing and memory managed on virtual machines.
- Economizes bandwidth by only transmitting screenshots and keystrokes between the end user and applications located at customer locations.
- No infrastructure required for the remote worker.
- End-user connectivity remains unchanged when migrating from on-premises Microsoft products to M365.

MORE SECURE

- Full end-to-end encrypted connectivity between remote worker and on-premises applications.
- Remote worker no longer has direct access to applications.
- Data isn't stored on endpoints, reducing risk for lost devices.
- Extends standardized security protocols to any device.
- Customer supported OS, application, and network infrastructure (e.g., W10 desktop and server patching)

EASY TO MANAGE

- Rapidly deploy and scale solution to corporate devices, BYOD PCs, and mobile devices, enabling easy migration for SaaS products.
- Granular control to allow workers access to only what they need.
- Limited infrastructure required to host windows desktops.

SYCOM PRIME WORKPLACE ON-PREMISES SOLUTION INCLUDES:

Components

- N+1 virtualization server/storage system
- Windows Virtual Desktop licenses
- Citrix licenses

Services

- 24x7x365 monitoring
- Quarterly patching for virtualization and network platforms
